Professional Experience

Front-End Developer | Cardinal Solutions, Client: EPRI | **July 2017 – present**

- Created proof-of-concept and starter applications with Angular and Ionic Native to establish a standard, hybrid, cross-platform web solution for the company
- Added multilingual support to the company's public facing website and an internal CMS application
- Researched progressive web app technologies to determine capabilities for rewriting a legacy application
- Architected Angular applications that utilized server-side rendering and progressive web app technologies

Front-End Developer | Cardinal Solutions, Client: Jabil | **July 2016 – June 2017**

- Developed new features for one of the company's batch production applications using Angular
- Streamlined front-end development workflow by rewriting and consolidating the build process
- Upgraded framework versions from beta release to official release and refactored deprecated code
- Rebuilt features of a legacy shop floor monitoring system application using AngularJS + Typescript

Front-End Developer | Cardinal Solutions, Client: QuietStream Financial | **April 2015 – May 2016**

- Lead front-end development using AngularJS to build a new application that interfaced with a Rails API
- Standardized the build and deploy processes for all the client's front-end applications using Gulp
- Increased code coverage by configuring a test suite and writing unit tests for all new functionality
- Implemented a style guide to create and maintain re-usable UI modules across applications

Front-End Developer | Cardinal Solutions, Client: Bank of America | **November 2013 – April 2015**

- Worked in an agile environment to build new and update existing customer-facing web applications, which streamline the account opening process for consumers and small businesses
- Lead front-end development to implement a responsive design by leveraging the Foundation framework
- Managed application assets by using Jawr to concatenate and compress CSS and JavaScript files, resulting in a 25% decrease in the number HTTP requests and a 41% decrease in the size of content transferred
- Improved the project's codebase by re-writing shared JavaScript components using a module design pattern

iOS Developer | Cardinal Solutions, Client: Carolinas HealthCare System | **January 2013 – October 2013**

- Assisted with the development, testing, and deployment of consumer-facing and employee iOS applications, making company resources more easily accessible to both patients and 60,000+ employees
- Coordinated product requirements and design with stakeholders and the development team to ensure both applications were scalable, allowing for future enhancements and updates
- Created re-usable components for shared functionality between applications to support product maintainability

iOS Developer | UA MIS, Client: Bentley Systems, Inc. | **August 2012 – December 2012**

- Improved the functionality of Bentley Navigator for iPad by importing external content from mapping files
- Arranged user interface elements in compliance with Apple's UI guidelines to meet stakeholder expectations
- Reviewed source code to determine the application's current capabilities and direct the plan phase

iOS Developer | UA MIS, Client: Bentley Systems, Inc. | **January 2012 – May 2012**

- Collaborated with a team of five individuals to develop Bentley CAP for iOS, a corrective action reporting tool
- Managed code pertaining to design to ensure organization and future maintainability of the application
- Assembled mockups of the user interface to help drive the design phase and meet client expectations
